

Alloy advice

Posted by Mister Two - 2013/06/05 15:10

Hey folks,

I've grown tired of my current wheels and have been keeping my eyes on donedeal in the hope I'll come across something that I like.

However, I've no idea what wheel sizes fit an mr2.

My current wheels are 17s and I'd like to keep them at that size but I have no idea what other measurements I need to be aware of.

I keep seeing numbers on adds like 4x114 etc etc and have no idea what these mean!

Anyone care to explain? :huh:

Check the third comment on this thread...

<http://mr2.ie/mr2-forum/17-want-to-buy/51582-alloy-advice-needed#51585>

4x114 is the stud pattern 4 being the number of holes and 114 being the PCD.

For a mk2 mr2 you're looking for wheels with a PCD of 5x114.5 the other numbers you should be concerned with is width and the ET.

The width will be 7j, 8j, 9j etc. This is just the width of the wheel.

The ET is the measurement of how where your bolt holes are in relation to the centre line of the wheel. zero offset is when it is perfectly centred, negative offset is when it is closer to the brakes and positive offset is when it is closer to the outer side of the wheel.

Shameless plug, I'm selling some nice split rims atm...

Any more questions just ask.

Thanks dude.

Yea saw your ad, they are animal rims but just a tiny bit outside my price range :laugh:

114 x 5 is correct for MR2, Celica is 100 x 5, Impreza's generally 114 x 5.
