

Need to buy idle speed control solenoid

Posted by mcstubbles - 2015/06/05 23:08

Hey,

Ive been having running issues with my rev5 turbo. I have found that my idle speed control valve solenoid is not reading the correct resistance when it is meant to close. I checked it with a battery and it doesnt shut when its meant to. Im thinking its staying open after the car comes up to temp and should be closed and maybe acting like a boost leak.

Does anyone have a working solenoid spare or want to sell?

Thanks
