

WANTED a NA hub for a passenger rear side

Posted by SuperAndy - 2016/04/20 17:39

Hey guys I have the NCT very soon and while doing an abs sensor I got a bolt stuck the hub. then i broke a bolt extractor in the hub so I'm up against the wall. anyone have a a passenger side rear hub to fit a rev 4 NA with ABS? Would really appreciate any help or leads. I have been offered every rev turbo hubs but I have been told the splines are different. Thanks again ;)

drill a new hole in axle close to original bolt hole,use a re-threader tool then,make a new bracket to fit out off metal strip,use then a hex bolt to hold-on your new bracket over your abs sensor,it works,done this for my rev 4 NA,its common the original bolts break,and then they cant be drilled into,try my way before you get into heavy costs,its cheap works,just spend a little bit off time,making bracket,making it fits proper,
