

ODBII -> JODB rev5 Turbo

Hi,

There is lots of articles online about gen4 engines have JODB port which the app Torque can use? Where is this port, I am assuming its not the diagnostic port in the engine bay, as gen3 and gen2 engines have them but dont have JODB?

As far as I know the rev5 turbo isnt gen4. Wouldn't make sense to change all the wiring on an outgoing model. Gen 4 is caldina and other jdm stuff only.

From what ive seen anyway. would be interesting to be proved wrong
