

Lambda sensor

Posted by dazzler mk2 - 2020/01/10 15:06

Hey everyone,

I need a lambda sensor for a 95 N/A
Rev 3 , would anyone have 1 lying around
That they are willing to sell .

Thanks Darren

If you don't have any luck in the second hand market, you can buy them from TCB:
http://www.tcbparts.co.uk/exhaust_system.htm

Has anyone used these lambda sensors ?
The guy doing the emissions told me to get a
Genuine toyota part ,but apparently they're not made anymore,

Hi,

The guy doing emissions is right, you want a genuine sensor. In this case genuine = Denso

Depending on manufacture date of your car (being rev3), you can have 89465-29815, 89465-19705 or 89465-17140 installed on your 3S-GE engine. I think it also depends on the market it made for...

The above part numbers are compatible with Denso DOX-0110 and DOX-0226. I don't know which one you need tho. DOX-0110 might be the same as 0226 without a connector, but not sure either.

There are many other brands compatible with these part numbers, but I wouldn't buy anything other than Denso (not even Bosch)

Also, don't buy used one.

Hope it helps,
Julius
